

How to copy programming from one remote to a new remote.

NOTE: remove rear cover from both remotes before you start copy process.

Program the first remote, example on channel 1. Then with rear cover removed on that remote (on the back side) hit P2 (shade will jog) then hit P2 again (shade will jog again). Then with back cover removed from new remote, hit P2 on that remote as well. Again shade will jog to confirm it accepted the programming.
